The Life of a File.

Your files are in a continual state of transformation: created, moved around, re-used, metadata is added, opened in various software, modified, copied, renamed, tracked, deleted, linked to other files, shared between people, re-created, and the cycle goes on.

Inefficiencies

USERS

- Waste time looking for files
- Can't find files
- Re-create or re-buy files you have
- Use the wrong versions
- Not always using the perfect assets
- Leave your current application to search for files
- Can't search for files stored offline

IT

- File not tagged or tagged with inconsistency
- Know what you have or what is being used
- Keep track of files stored offline
- Deal with the "40% duplicate files"
- Keep track of file and system activities
- Automate file management

MANAGERS

- Lack of visibility across all files in ecosystem
- Lack of understand for what drives productivity
- Lack of information to make data-driven decisions

Yadle Helps You Harvest your Data.

Yadle collects, analyzes, and augments your file data to improve searching and provide valuable insights.
